HERMES AI WORKBOOK

The 30-Day Hands-On Implementation Guide

INTRODUCTION

How to Use This Workbook

This is not a book you read. This is a book you use. The 30-day program in this workbook is designed to take you from "interested in Hermes AI" to "running real AI workflows in production" in 30 days. Each day has 30-60 minutes of work. By day 30, you will have built and deployed 6+ production AI workflows.

The 30-day program:

- **Week 1 (Days 1-7):** Setup and foundations. Install Hermes, set up your environment, run your first prompts.
- **Week 2 (Days 8-14):** Core workflows. Build 3 fundamental workflows (chatbot, document Q&A, content generation).
- **Week 3 (Days 15-21):** Advanced workflows. Build 3 advanced workflows (agent, RAG system, automation pipeline).
- **Week 4 (Days 22-30):** Production deployment. Deploy to the cloud, add monitoring, optimize performance.

What you will need:

- A computer with at least 16GB RAM (32GB recommended for 13B models)
- An NVIDIA GPU with 8GB+ VRAM (or a cloud GPU account, \$5-30/month)
- Basic Python knowledge (or willingness to learn)
- 30-60 minutes per day for 30 days
- A project to apply the workflows to

What you will build:

- A local Hermes installation with at least one fine-tuned model
- 3 fundamental workflows (chatbot, document Q&A, content generation)

- 3 advanced workflows (agent, RAG system, automation pipeline)
- A production deployment with monitoring
- A portfolio of 6+ AI workflows you can show to clients or employers

The workbook is structured as daily exercises. Each day has 3-5 exercises, each with 1-3 hours of work. The exercises are designed to be done in order. Skipping days will create gaps. Doing the exercises will produce real, working AI workflows.

□ KEY TAKEAWAYS

- **Week 2 (Days 8-14):** Core workflows. Build 3 fundamental workflows (chatbot, document Q&A, content generation).
- **Week 3 (Days 15-21):** Advanced workflows. Build 3 advanced workflows (agent, RAG system, automation pipeline).
- **Week 1 (Days 1-7):** Setup and foundations. Install Hermes, set up your environment, run your first prompts.
- **Week 4 (Days 22-30):** Production deployment. Deploy to the cloud, add monitoring, optimize performance.
- A computer with at least 16GB RAM (32GB recommended for 13B models)
- A portfolio of 6+ AI workflows you can show to clients or employers
- An NVIDIA GPU with 8GB+ VRAM (or a cloud GPU account, \$5-30/month)

PART 1: WEEK 1 — SETUP AND FOUNDATIONS

Day 1: Install Hermes and Run Your First Prompt

Goal: Install Hermes on your machine and run your first prompt.

Exercise 1.1: Check your hardware (15 min).

Open a terminal and run:

- `nvidia-smi` (to check GPU)
- `free -h` (to check RAM)
- `df -h` (to check disk space)
- `python --version` (to check Python version, need 3.10+)

Write down your hardware specs. You will need them for model selection.

Exercise 1.2: Install Ollama (15 min).

If you are on Linux or Mac:

```
curl -fsSL https://ollama.com/install.sh | sh
```

If you are on Windows:

Download from <https://ollama.com> and run the installer.

Verify installation: `ollama --version`

Exercise 1.3: Pull a Hermes model (30-60 min, depends on internet).

For 8GB VRAM GPU: `ollama pull llama3.1:8B`

For 16GB+ VRAM GPU: `ollama pull llama3.1:70B`

For cloud GPU: skip this, use cloud setup (Day 7)

The download is 4-8GB. The download time depends on your internet. While you wait, read the next exercise.

Exercise 1.4: Run your first prompt (10 min).

In your terminal, run:

```
ollama run openhermes:13b "Explain the concept of an AI agent in 3 sentences"
```

You should see a response in 5-30 seconds (depending on your hardware).

Exercise 1.5: Try 5 more prompts (15 min).

Try these prompts and see what Hermes produces:

"Write a haiku about machine learning"

"Explain the difference between RAG and fine-tuning"

"Write a Python function to calculate the factorial of a number"

"Translate 'Hello, how are you?' to French, Spanish, and German"

"Give me 5 business ideas for AI in healthcare"

Today's deliverable: Hermes is installed and running on your machine. You have successfully run 6 prompts.

Notes: _____

KEY TAKEAWAYS

-  The download is 4-8GB. The download time depends on your internet. While you wait, read the next exercise.
-  Write down your hardware specs. You will need them for model selection.
-  You should see a response in 5-30 seconds (depending on your hardware).
-   (to check Python version, need 3.10+)
-  "Write a Python function to calculate the factorial of a number"
-  "Translate 'Hello, how are you?' to French, Spanish, and German"
-  For 8GB VRAM GPU: `ollama pull hermes-2-theta-llama-3-8b`

Day 2: Set Up Your Development Environment

Goal: Set up a Python environment for working with Hermes programmatically.

Exercise 2.1: Create a project directory (5 min).

```
mkdir ~/hermes-workbook
```

```
cd ~/hermes-workbook
```

```
mkdir day02
```

```
cd day02
```

Exercise 2.2: Set up a virtual environment (10 min).

```
python3 -m venv venv
```

```
source venv/bin/activate # On Windows: venv\Scripts\activate
```

Exercise 2.3: Install required packages (15 min).

```
pip install requests python-dotenv
```

Exercise 2.4: Write your first Hermes script (30 min).

Create a file called `□`:

```
import requests
```

```
import json
```

```
def ask_hermes(prompt, model="openhermes:13b"):
```

```
    url = "http://localhost:11434/api/generate"
```

```
    data = {
```

```
        "model": model,
```

```
        "prompt": prompt,
```

```

"stream": False
}

response = requests.post(url, json=data)

return response.json()["response"]

if __name__ == "__main__":
    prompt = "What is the capital of France?"
    response = ask_hermes(prompt)
    print(f"Prompt: {prompt}")
    print(f"Response: {response}")

```

Run it: ☐

Exercise 2.5: Modify the script to ask 5 questions (30 min).

Modify the script to ask 5 questions in a loop, with a 1-second delay between questions. Save the responses to a file called ☐.

Today's deliverable: A working Python script that calls Hermes programmatically.

Notes: _____

☐ **KEY TAKEAWAYS**

- ☐ Modify the script to ask 5 questions in a loop, with a 1-second delay between questions. Save the responses to a file called `responses.txt`.
- ☐ Create a file called `first\_prompt.py`:
- ☐ Run it: `python first\_prompt.py`

Day 3: Understand Prompt Engineering

Goal: Learn the 5 core prompt engineering techniques.

Exercise 3.1: The basic prompt (10 min).

```
prompt = "Write a product description for a smart watch"
```

Run it. Save the response.

Exercise 3.2: Add specificity (10 min).

```
prompt = """Write a product description for a smart watch.
```

```
Target audience: fitness enthusiasts aged 25-40
```

```
Key features: heart rate, GPS, sleep tracking, 7-day battery
```

```
Tone: energetic, motivating
```

```
Length: 150 words
```

```
Format: headline + 2 paragraphs"""
```

Run it. Compare to Exercise 3.1.

Exercise 3.3: Add examples (few-shot) (20 min).

```
prompt = """Convert the product feature to a marketing tagline.
```

```
Feature: 7-day battery life
```

```
Tagline: "Charge once. Adventure all week."
```

```
Feature: Heart rate monitoring
```

```
Tagline: "Know your heart. Know your workout."
```

```
Feature: GPS tracking
```

```
Tagline: ____
```

Run it. The few-shot prompt should produce better taglines.

Exercise 3.4: Add role and constraints (20 min).

```
prompt = """You are a senior copywriter at Apple. Write a
50-word product description for the Apple Watch Ultra 2. Use
vivid language, focus on the experience (not features), and end
with a memorable phrase."""
```

Run it. Compare to previous responses.

Exercise 3.5: Add chain-of-thought (20 min).

```
prompt = """Solve this problem step by step:
```

```
A store sells shirts for $25 and pants for $40. If a customer
buys 3 shirts and 2 pants, what is the total cost?
```

```
Show each step of your calculation."""
```

Run it. Notice how chain-of-thought improves the math.

Today's deliverable: A prompt engineering cheat sheet with your 5 best prompts from today.

Notes: _____

□ KEY TAKEAWAYS

- Run it. The few-shot prompt should produce better taglines.
- Run it. Notice how chain-of-thought improves the math.
- Run it. Compare to previous responses.
- Run it. Compare to Exercise 3.1.

Day 4: Build a Simple Chatbot

Goal: Build a command-line chatbot that maintains conversation history.

Exercise 4.1: Design the conversation loop (15 min).

The chatbot will:

- Greet the user

- Ask the user for input

- Send the input to Hermes with conversation history

- Print the response

- Repeat from step 2 until the user types "exit"

Exercise 4.2: Implement the chatbot (60 min).

Create `chatbot.py`:

```
import requests

def ask_hermes(prompt, model="openhermes:13b"):
    url = "http://localhost:11434/api/generate"
    data = {"model": model, "prompt": prompt, "stream": False}
    response = requests.post(url, json=data)
    return response.json()["response"]

def main():
    print("Chatbot: Hello! I am Hermes. Type 'exit' to end the conversation.")
    history = []

    while True:
        user_input = input("You: ")
```

```

if user_input.lower() == "exit":

print("Chatbot: Goodbye!")

break

# Build prompt with history

history.append(f"User: {user_input}")

context = "\n".join(history[-10:]) # Last 10 messages

prompt = f"The following is a conversation with an AI
assistant. The assistant is helpful, creative, and
friendly.\n\n{context}\nAssistant:"

response = ask_hermes(prompt)

print(f"Chatbot: {response}")

history.append(f"Assistant: {response}")

if __name__ == "__main__":

main()

```

Exercise 4.3: Test the chatbot (15 min).

Run the chatbot and have a 5-message conversation. Try to confuse it. Try to make it break. Take notes on what works and what doesn't.

Exercise 4.4: Improve the chatbot (30 min).

Add a system prompt that gives the chatbot a persona. For example:

- "You are a friendly customer service agent for a coffee shop."
- "You are a patient math tutor for middle school students."
- "You are a knowledgeable travel guide for Japan."

Try each persona. Notice how the responses change.

Today's deliverable: A working chatbot that maintains conversation history and has a customizable persona.

Notes: _____

□ KEY TAKEAWAYS

- Run the chatbot and have a 5-message conversation. Try to confuse it. Try to make it break. Take notes on what works and what doesn't.
- Add a system prompt that gives the chatbot a persona. For example:
 - "You are a friendly customer service agent for a coffee shop."
 - "You are a patient math tutor for middle school students."
 - Send the input to Hermes with conversation history
 - Try each persona. Notice how the responses change.
 - "You are a knowledgeable travel guide for Japan."

Day 5: Add Streaming Responses

Goal: Make the chatbot stream responses token by token for a more natural feel.

Exercise 5.1: Understand streaming (15 min).

When you call an LLM without streaming, you wait for the entire response before seeing anything. With streaming, you see the response as it is generated, token by token. Streaming is essential for a good user experience.

Exercise 5.2: Modify the chatbot to stream (45 min).

Update `chatbot.py` to use streaming:

```
import requests

import sys

def ask_hermes_stream(prompt, model="openhermes:13b"):
    url = "http://localhost:11434/api/generate"
    data = {"model": model, "prompt": prompt, "stream": True}
    response = requests.post(url, json=data, stream=True)

    full_response = ""
    for line in response.iter_lines():
        if line:
            data = line.decode('utf-8')
            chunk = requests.post # Placeholder, see below

    # Actual parsing:
    import json
    chunk_data = json.loads(data)
```

```
if "response" in chunk_data:
    token = chunk_data["response"]
    full_response += token
    print(token, end="", flush=True)

print() # New line at end

return full_response
```

Exercise 5.3: Test the streaming chatbot (15 min).

Notice how the response appears token by token, similar to how ChatGPT works.

Exercise 5.4: Add a "typing" indicator (15 min).

Add a small delay before the response starts to simulate a "thinking" state.

Today's deliverable: A streaming chatbot that feels responsive and natural.

Notes: _____

□ KEY TAKEAWAYS

- Notice how the response appears token by token, similar to how ChatGPT works.
- Add a small delay before the response starts to simulate a "thinking" state.
- Update `chatbot.py` to use streaming:

Day 6: Add Conversation Memory and Context

Goal: Improve the chatbot's context handling and memory.

Exercise 6.1: Add a token counter (30 min).

LLMs have a maximum context length (e.g., 4K, 8K, 32K tokens). Your chatbot needs to track how many tokens it is using and truncate the history when needed.

Install a tokenizer: □

```
import tiktoken

def count_tokens(text, model="gpt-3.5-turbo"):
    encoding = tiktoken.encoding_for_model(model)
    return len(encoding.encode(text))
```

Add token counting to your chatbot. When the total tokens exceed 3000, truncate the oldest messages.

Exercise 6.2: Add summarization for long conversations (30 min).

When the conversation gets too long, summarize the older messages using Hermes itself. This preserves the context while reducing tokens.

```
def summarize_history(history):
    summary_prompt = f"Summarize this conversation in 3 sentences:\n\n{chr(10).join(history)}"
    return ask_hermes(summary_prompt)
```

Exercise 6.3: Add persona persistence (30 min).

Save the persona and the conversation to a file. Load them on startup. This way, the chatbot remembers its role and previous conversations.

Today's deliverable: A chatbot with token management, summarization, and persistent memory.

Notes: _____

□ KEY TAKEAWAYS

- LLMs have a maximum context length (e.g., 4K, 8K, 32K tokens). Your chatbot needs to track how many tokens it is using and truncate the history when needed.
- Save the persona and the conversation to a file. Load them on startup. This way, the chatbot remembers its role and previous conversations.
- When the conversation gets too long, summarize the older messages using Hermes itself. This preserves the context while reducing tokens.
- Add token counting to your chatbot. When the total tokens exceed 3000, truncate the oldest messages.
- Install a tokenizer: ``pip install tiktoken``

Day 7: Set Up Cloud GPU Access (Optional but Recommended)

Goal: Set up access to a cloud GPU for running larger models.

Exercise 7.1: Choose a cloud provider (15 min).

For most users, OpenRouter is the easiest:

- Sign up at <https://openrouter.ai>
- Add \$5-10 in credits
- Get your API key

Exercise 7.2: Configure the API key (15 min).

Create a `.env` file:

```
OPENROUTER_API_KEY=your_key_here
```

Exercise 7.3: Test the API (30 min).

Update your chatbot to use OpenRouter as a fallback when the local model is too slow or unavailable:

```
import os
import requests
from dotenv import load_dotenv

load_dotenv()

def ask_hermes_cloud(prompt,
model="openhermes/openhermes-2.5-13b"):
    api_key = os.getenv("OPENROUTER_API_KEY")
    url = "https://openrouter.ai/api/v1/chat/completions"
    headers = {"Authorization": f"Bearer {api_key}"}
```

```
data = {  
    "model": model,  
    "messages": [{"role": "user", "content": prompt}]  
}  
  
response = requests.post(url, json=data, headers=headers)  
return response.json()["choices"][0]["message"]["content"]
```

Exercise 7.4: Compare local vs cloud (15 min).

Run the same prompt on both. Notice the speed and quality differences.

Today's deliverable: A chatbot that can use either local or cloud Hermes models.

Notes: _____

KEY TAKEAWAYS

- ☐ Update your chatbot to use OpenRouter as a fallback when the local model is too slow or unavailable:
- ☐ Run the same prompt on both. Notice the speed and quality differences.
- ☐ For most users, OpenRouter is the easiest:
- ☐ Sign up at <https://openrouter.ai>

ABOUT THE AUTHOR & THE AI MASTERY FLEET

Executive Leadership, Autonomous Architecture & Enterprise B2B Systems

ENJOYED THIS FREE OPENING SAMPLE?

You have just experienced the foundational chapters of **The AI Agent Action Workbook**. To unlock the complete, unabridged masterwork (including all production code snippets, architecture schemas, system prompts, and client onboarding SOPs), order instant digital access or print editions below:

- **Official Digital Store:** <https://books.adorisedigital.com> (Instant PDF + Kindle EPUB)
- **Global Digital Storefront:** <https://adorisedigital.gumroad.com> (Worldwide Instant Access)
- **Paperback & Kindle on Amazon:** Search Google for “*The AI Agent Action Workbook Sanjay Shharma*”

Sanjay Shharma is an Author, Corporate Executive Mentor, and Technology Strategist holding an M.Sc., MBA, and APSCM from the prestigious **Indian Institute of Management (IIM) Calcutta**, with over thirty years of executive management and business leadership.

He architected **The AI Mastery & Receptionist Series** because modern enterprises are overwhelmed by repetitive operational bottlenecks, missed high-ticket phone calls, and high employee churn. Instead of theoretical AI jargon, his frameworks provide battle-tested, zero-code and low-code automated software fleets that capture revenue 24/7.

Author Credentials & Strategic Ecosystem:

Academic Alumni	Indian Institute of Management Calcutta (IIM Calcutta) • APSCM
Specialization	Autonomous AI Agents, Voice AI Receptionists & B2B Operational Scaling
Publisher	Adorise Digital • A Division of Trendy DigiStore LLC (Wyoming, USA)

TURNKEY ENTERPRISE AI IMPLEMENTATION:

Need turnkey autonomous voice receptionists, lead capture bots, or programmatic marketing pipelines deployed for your firm? Explore live software architectures and book an executive consultation at adorisedigital.com or email support@adorisedigital.com.

THE 48-BOOK MASTER AUTHOR CATALOG • PART 1

Flagship Works by Sanjay Shharma • Published Worldwide by Adorise Digital

1. THE CARE COLLECTION (14 Flagship Volumes • Marital Health, Aging & Healing)

- #1 **Still Married, Just Silent** — 14 conversations to reopen an emotionally quiet marriage
- #2 **The Quiet Care** — How to give and receive care in a marriage that lasts
- #3 **The Second Chapter** — Rebuilding identity, purpose, and daily joy after caregiving
- #4 **The Second Honeymoon** — Reigniting romance, vulnerability, and play after kids leave
- #5 **The Survivor** — Compassionate protocol when one spouse is left behind
- #6 **The Long Hello** — How couples 50–70 reconnect after the last child leaves
- #7 **When They Forget Your Name** — Navigating dementia, cognitive decline, and memory care
- #8 **Gray Divorce** — Coming back together (or parting) with financial dignity at 55+
- #9 **The Last Sandwich** — Caring for aging parents, spouse, and self at the same time
- #10 **The Long Goodbye** — When your spouse is dying and the marriage is still yours
- #11 **Remarried at 60** — Blending adult families, estates, and hearts in sunset years
- #12 **After the Last Goodbye** — Practical and emotional roadmap for first 365 days of loss
- #13 **The Friends Who Fade** — Why friendships disappear in midlife & building adult tribes
- #14 **Hum Ladte Nahi (Hinglish)** — Shaadi ko wapas kholne ka 30-din ka practical plan (India)

2. THE AI MASTERY & VOICE AUTOMATION FLEET (10 Volumes • Agency & Operations)

- #15 **The AI Agent Blueprint** — Building, deploying, and monetizing autonomous software fleets
- #16 **The AI Agency Playbook** — From zero to \$50,000/month offering turnkey AI automation
- #17 **The AI Content Agent** — Autonomous video, social scheduling, and programmatic SEO
- #18 **The AI Agent Action Workbook** — Interactive architecture schemas, code snippets, and worksheets
- #19 **The AI Agent Cheat Sheets** — 50+ battle-tested system prompts for client deployment
- #20 **Never Miss Another Call** — How front-desk voice AI captures \$100,000 in lost revenue
- #21 **The AI Receptionist Blueprint** — Architecture, Twilio SIP trunking, and CRM integration
- #22 **The AI Receptionist Buyer's Guide** — What founders must know before buying or deploying
- #23 **AI Front Desk for HVAC & Home Services** — Capturing emergency dispatch calls 24/7 without missed leads
- #24 **AI Front Desk for Law Firms & Clinics** — Qualifying high-net-worth client consultations automatically
